AMENDMENTS TO THE CLAIMS

1. (currently amended) A method for manipulating a media file using a program having a graphical user interface on a display associated with a computer having access to the file, wherein the graphical user interface comprises a play head moveable to correspond to different locations within the media file, the method comprising:

    continuously moving the play head on the graphical user interface from a first location to a second location; and

    concurrently with moving the play head, displaying and audibly ~~broadcasting~~ playing back portions of the media file passed by the play head[[.]];

    wherein the displaying and audible playing back are at a variable speed determined in proportion to the distance between the current play head position and the second location.

2. (currently amended) The method of claim 1, wherein the displayed and audibly ~~broadcast~~ played back portions of the media file are not contiguous within the file.

3. (currently amended) The method of claim 1, wherein the number of displayed and audibly ~~broadcast~~ played back portions is inversely proportional to a speed of the movement of the play head.

4. (original) The method of claim 1, further comprising playing the media file at a normal speed starting from the second location after the play head has been moved to the second location.

5. (original) The method of claim 1, wherein the play head is moved backwards.

6. (cancelled)

7. (original) The method of claim 1 wherein the variable speed is limited to twice a normal playback speed.

8. (currently amended) A method for playing a media file in a player, wherein the player comprises a play head, the method comprising:

dragging the play head; and

concurrently with dragging the play head, displaying and audibly ~~broadcasting~~ playing back portions of the media file that the play head passes[[.]];

wherein a playback speed of a portion of the media file is determined in proportion to a distance separating the cursor and the play head.

9. (cancelled)

10. (currently amended) The method of claim 8, further comprising displaying and ~~broadcasting~~ playing back the media file at a normal speed starting from the frame to which the play head was dragged.

11. (original) The method of claim 8, wherein the play head is dragged backwards.

12. (cancelled)

13. (original) The method of claim 8 wherein the variable speed is limited to twice a normal playback speed.

14. (currently amended) A computer readable medium, having disposed thereupon program instructions for a computer, the instructions configured to allow the computer to locate and playback a portion of a media file, wherein the locating and playback comprises the steps of:

receiving from a user interface signals corresponding to positioning a cursor over a scrubber bar in a position corresponding to a location of a play head;

receiving from the user interface signals corresponding to grabbing and moving the play head along the scrubber bar, wherein the cursor moves at a rate faster than the play head such that there is a distance separating the play head and the cursor; and

playing back ~~an audible~~ a portion of the media file in response to the movement of the play head along the scrubber bar[[.]];

> wherein a playback speed of a portion of the media file is determined in proportion to a distance separating the cursor and the play head.

15. (cancelled)

16. (original) The computer readable medium of claim 14, wherein the variable speed is limited to twice a normal playback speed.

17. (currently amended) The computer readable medium of claim 14, further comprising displaying and audibly ~~broadcasting~~ playing back the media file at a normal speed starting from a location to which the play head was dragged.

18. (original) The computer readable medium of claim 14, wherein the play head is dragged backwards.

19. (currently amended) A graphical user interface for a media viewing program executed by a computer, the graphical user interface comprising a scrubber bar, a cursor being movably positionable along the scrubber bar, and a play head movable along the scrubber bar for indicating a current location in a media file, wherein a playback speed of ~~an audible~~ a portion of the media file is determined in proportion to a distance separating the cursor and the play head ~~along the scrubber bar~~.

20. (original) The graphical user interface of claim 19 wherein the playback speed is limited to twice a normal playback speed.
